3 WAYS TO TELL IF YOU'RE BUYING A FAKE PRODUCT

WE CREATED A PERCEPTION TO KNOW HOW TO COMPREHEND ABOUT A FAKE PRODUCT

The art of duplicating a product is growing stronger every day, and with that, it becomes tough to distinguish between real and fake one. The online sector of shopping makes it easier for fake brands to grow their market. However, it is entirely possible for customers to figure out between the original and fake by using a few tricks.

Here are the top 3 ways, one can figure out the real products from fake ones:

1. NO CORRELATION IN PRICE AND QUALITY

Not all discount offers are usually good. If a store is offering an extremely high-quality product at a low rate, it usually means that the product is either damaged or fake. One needs to be sure that the deals make sense both on the sellers and customer's part and not just jump in because it is cheap.

2. FAULTY PACKAGING AND PLACE OF ORIGIN

Another way of figuring out a fake product is the product packaging if it is damaged and one scans the position of the source of the product extremely well. Original products do not have faulty packaging and their raw materials and manufacturing history traces back to a well-known place.

3. UNDERSTANDING THE VALUE OF THE PRODUCT

Research is the only way that can help you in this aspect. Quite on this note, if you know well about a definite product, definitely you will be understanding its value. Thus, you create an ability to judge for the products that are on sale. Too less of a price should certainly prick you.

So next time if you find the packaging is faulty and the price or product quality does not match, it usually means the product is **FAKE**.

Just follow these 3 steps and make yourself alert from being dupped or counterfeit product. Also, all apparel sector should use anti-counterfeit solutions and make awareness, so that they do not lose customers and brand value.
